

# Meeting

Philip Tibom  
Hossein Hussain  
Daniel Olsson

2016-03-03

## 1 Contents of this meeting

- Completed from last meeting.
- Any issues?
- Decision on implementing new technologies.
- What to do until next meeting.

## 2 What has been completed

Tasks from 2016-02-29

- Produce a design in Photoshop. // Daniel
- Produce HTML and JSF templates. For the main page. // Daniel
- Produce BackingBeans. Hook them to EJBs // Hossein
- Produce queries that search for hotels & returns them. // Philip

None of the tasks has been finished, due to requiring more time than expected.

## 3 Issues

All of the tasks required a lot more time than expected so we will continue to work on these. We figured that creating backing beans before the actual JSF pages makes it harder. So Hossein will be working on creating queries instead of backing beans.

Philip will help Daniel with the front-end.

## 4 Decisions on implementing new technologies

There is a JSF framework called BootsFaces that implements Bootstrap. This framework can be used side-by-side together with PrimeFaces. We have tested it and it works very well. So we have decided to include this in our maven project.

## 5 Todo until next meeting

Next meeting scheduled at 2016-03-07.

### Todo

- Produce a design in Photoshop. // Daniel & Philip
- Produce HTML and JSF templates. For the main page. // Daniel & Philip
- Produce queries that search for hotels & returns them. // Hossein
